

# Toxicity

The ... indicates that any text can appear in between the # expressions

Grade and adverse event can be specified in either order. Grade does not have to come first.

- #toxicity ... #<grade> ... #<adverse event>

Must have exact #toxicity tag (case can vary) before any of the other tags

After #toxicity, **one and only one** of the **grade** values must be specified:

#Grade 1  
#Grade 2  
#Grade 3  
#Grade 4  
#Grade 5

After #toxicity, **one and only one** **adverse event** must be specified. All possible values are as defined in CTCAE v4. Examples:

#nausea  
#dyspepsia  
#anemia  
#eye pain  
#febrile neutropenia

Adverse events and grades for each are defined by **Common Terminology Criteria for Adverse Events (CTCAE) version 4.03 (June 14, 2010)**.

## Examples:

- Patient reports #toxicity #grade 1 #nausea.
- #Toxicity #eye pain reported at #grade 2.
