Side effects to treatment, important for effective evaluation of disease and treatment, based on the Common Terminology Criteria for Adverse Events (CTCAE). Based on Toxicity: the evaluation of the patient or patient reported symptoms, did the patient have a Grade III or Grade IV toxicity. #toxicity for the patient is #<grade> with #<adverse event> likely from #<attribution>. Example: 2. After #toxicity, 4. After #toxicity, 3. After #toxicity. Process: 1. Must start with specify one grade one attribution specify one the #toxicity tag. value: adverse event. All value must be specified: possible values are #Grade 1 defined in CTCAE #Grade 2 #treatment v4. Examples: #Grade 3 #disease #Grade 4 #nausea #error #Grade 5 #dyspepsia #unrelated #anemia #unknown #eye pain #febrile #neutropenia Patient reports #toxicity #grade 1 #nausea attributed to #treatment. Additional examples: #Toxicity #eye pain reported at #grade 2. Probably #unrelated.

Grade, adverse event, and

attribution can be specified

in any order.

Case of the #toxicity

tag can vary.

Adverse event and grade are

Terminology Criteria for Adverse Events (CTCAE) version 4.03

defined by Common

(June 14, ,2010).
